

Dear BHMS inquirer,

Thank you for your interest in our Electronic Medical Records. In addition to founding BHMS, I am a radiologist who has been running a busy breast imaging center for over 25 years. In the early 1980s, I began developing a program to facilitate the myriad of details associated with breast cancer screening. The breast center was actually the original testing site for my very first DOS based software system, called Mammotrax and continues to be a beta site for the later versions.

We upgraded to Mammotrax for Windows in the early 1990s, which resulted in countless improvements for my center. These two systems were basically designed for the needs of mammography offices. After years of testing and refinement, we released a completely new system called OMNITRAX which was designed to extend beyond mammography and become a comprehensive tool for the entire radiology service from scheduling to billing and everything in between. Since its implementation our staff and patients have noticed considerable improvements in employee productivity and overall performance.

As intended, OMNITRAX is not just limited to use in radiology offices. In fact, it can be used in any modern medical office. BHMS is proud of the response that we have gotten since we put OMNITRAX on the market. Our user list has increased appreciatively in the last few years alone. We believe this increase is due to the fact that we have successfully created a low-cost, full-featured Electronic Medical Record. Furthering our mission to provide such efficient software systems, we will soon release APPOINTMENT Click, PATIENT Click, and BILLING Click.

Once you have reviewed our on-line demonstrations, we invite you to compare our products and prices to the competition. We are sure you will discover that our software is a wise investment for your facility. Please remember to contact our technical support department if you have any questions regarding our systems or BHMS. We look forward to hearing from you soon and possibly adding you to our client user list.

Sincerely,
James H. Pritchard, MD
